

VI.5.3D-MODTZC PROGRAM FCST HCL TECHNIQUE MODTZC

Purpose

Technique MODTZC sets the time zone to be used when a date is entered with an hour but not time zone code as MOD input.

Valid values are NO (0) and YES (1).

If MODTZC is YES (1) then the value of the one Argument of this Technique is used as the MOD time zone code.

If MODTZC is NO (0) or the Argument is blank then the user default time zone code stored on file USERPARM is used as the MOD time zone code.

The Global default value is NO (0).

This Technique is Universal.

The Global default for the Argument for MODTZC is blank.

Form of Input

MODTZC(integer) tzc

where integer is 0 or 1 specifying whether MODTZC is off or on
tzc is the time zone code used only if MODTZC is on

Example

MODTZC(1) EST

Eastern Standard Time will be used as the default time zone for any date input with an hour but no time zone coded on the MOD input card.
